                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              NO:888
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          0
```

sequence of a Bifidobacterium genome selected from the nucleotide sequences given in ABQ81842 and ABQ81843, or a sequence exhibiting at least 90% identity or which hybridises with the sequences given in ABQ81842 and ABQ81843. Also described is a polynucleotide (II) encoding the sequence of the sequences of the abgencies of the above
encoding

The invention relates to an isolated polynucleotide (ACF64435-ACF64733) encoding a Propionibacterium acnes protein. The invention also relates polypeptides encoded by the polynucleotides (ABM35624-ABM64536) and to

6

New Propionibacterium acnes polypeptides and polynucleotides encoding the polypeptide, useful for diagnosing, preventing or treating acne vulgaris, or for stimulating an immune response specific for a P. acnes protein.

Claim 7;

SEQ

ID NO 30600; 1481pp; English.

invention describes a polynucleotide (I) comprising

Claim 3;

SEQ ID NO 888; 80pp; English.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             CC heterologous polypepide. [7] has antidiarrheic and antibacterial CC activities, and can be used as an inhibitor of Salmonella. [1] (which is C a probe) is useful for the detection and/or identification of Silmonella. [1] (which is C Bifidobacterium longum in a biological sample. A carrier containing the CC lactic acid bacterium Bifidobacterium longum NCC2705 (CNCM I-2618) can be CC used for preventing and/or treating diarrhoea brought about by pathogenic CC bacteria and/or rotavirus. The carrier is a food composition selected CC products, ice-creams, fermented cereal based products, milk based fermented CC products, ice-creams, fermented cereal based products, milk based CC products, infant formula, pet food or a pharmaceutical composition CC supplement, wet oral supplement, dry tube feeding or wet tube feeding. CC [1] is useful in DNA arrays or chips to carry out analysis of the CC expression of the Bifidobacterium gene. AB081844 to AB081850 represent CC Bifidobacterium related nucleotide sequences given in the Sequence CC specification. N.B. The sequence data for this patent is not represented CC in the printed specification but is based on sequence information CC supplied by the European Patent Office

The p. acnes in a composition or an immune polypeptides, antibodies, fusion proteins, T cell populations or antigen-presenting cells that express the polypeptides, antibodies, fusion proteins, T cell populations or antigen-presenting or treating acne compositions, or for stimulating an immune response specific for a p. acnes for concleic acid hybridisation. The vaccine composition is useful for the stimulation of an immune response against p. acnes, or for treating acne, and the kit is useful for performing a diagnostic assay. The present control is useful for a specifically claimed p. acnes polypeptide which is contain an immunogenic region. Note: The sequence data for the form part of the present on the vaccine composition but useful to performing a diagnostic assay.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Query Match

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        bacterial infection, for evaluating a compound, such as a polypeptide, for the ability to bind a P. aeruginosa nucleic acid, as components of effective antibacterial targets, as targets for antibacterial drugs, including anti-P. aeruginosa drugs, as templates for recombinant production of P. aeruginosa derived peptides or polypeptides, as target components for diagnosis and/or treatment of P. aeruginosa-caused infection, and in detection of P. aeruginosa sequences or other sequences of Pseudomonas species using biochip technology. Sequences ABO67826-ABO84396 represent P. aeruginosa polypeptides of the invention. Note: The sequence data for this patent did not form part of the printed specification but was obtained in electronic format from USPTO at
                                                                         encoding a cell proliferation-related polypeptide. The nucleic acid molecule and the encoded polypeptide, and methods are useful for modulating cell proliferation, senescence, differentiation, development, and stress response in plants, and for producing enhanced food crops. The present sequence represents a cell proliferation-related polypeptide. The present sequence is published separately from the main body of the
                                                                                                                                                                                                                                                                                                                                                         New nucleic acid molecule encoding a cell proliferation-related polypeptide, useful for modulating cell proliferation, sensecence, differentiation, development, and stress response in plants, and for producing enhanced food crops.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Oryza sativa
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             differentiation;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   cell proliferation related polypeptide;

                                                                                                                                                                                                                                                                             The invention comprises the amino acid and coding sequences of rice stress-related proteins. The DNA and protein sequences of the invention are useful for regulating and controlling plant maturation and development, including proliferation, sensecence, disease-resistance, or stress response. They are also useful for producing transgenic plants having improved properties, e.g. tolerance to pests, herbicides, or biotic or abiotic stresses, improved nutritional value, increased yield or proliferation, or improved structure causing less loss from lodging or shattering. The present amino acid sequence represents a rice stress-related protein of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          rice; stress-related protein; plant maturation; plant development; plant proliferation; plant senescence; plant disease-resistance; plant stress response; transgenic plant; pest tolerance; herbicide tolerance; biotic stress tolerance; abiotic stress tolerance; improved nutritional value; increased yield; increased proliferation.

The invention relates to a novel amylo maltase polypeptide comprising the camino acid sequence of a wild-type amylo maltase with a substitution, canddition or deletion at a position, where the amino acid residue conteracts with acarbose of amino acids other than the wild-type amylo conteracts with acarbose of amino acids other than the wild-type amylo containing a nucleic acid sequence encoding the nucleic acid sequence; a foodstuff, a food additive or a modifier of foodstuff containing the nucleic acid sequence; a transgenic organism containing the nucleic acid sequence; a containing the nucleic acid sequence of foodstuff containing the nucleic acid sequence of foodstuff containing the nucleic acid sequence of containing the nucleic acid sequence of acid sequence of containing the nucleic acid sequence of the nucleic acid sequence of condaining the mino acid sequence of the novel amylo maltase polypeptide; and a cyclic glucan obtained by reacting the novel amylo maltase polypeptide; condatuff such as cooked rice, Japanese confectionery, snacks, bakeries, noodles, Chinese dumpling, shao-mai, fishery kneading goods, condates, chinese dumpling, shao-mai, fishery kneading goods, refrigerating foods, baby foods, pet foods, feed for animals, drinks, and food supplements, where the method involves adding the novel amylo maltase polypeptide to the foodstuff before or immediately after neat composition, infusion solution or composition for adhesion, where the composition is useful for adhesion.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   ADQ15026 standard; protein; 505
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    New mutated amylo maltase polypeptide having increased enzyme activity and reduced hydrolyzing activity, useful for manufacturing foodstuffs such as Japanese confectionery, noodles, baby foods, and food additives.

                                                                                                                                                                                The invention describes a new isolated nucleic acid encoding a Klebsiella pneumoniae polypeptide. Also described are: a recombinant expression vector comprising the nucleic acid, operably linked to a transcription regulatory element; and a cell comprising the recombinant expression vector. The nucleic acid is useful for preparing a vaccine composition against Klebsiella pneumoniae. This is the amino acid sequence of a Klebsiella pneumoniae polypeptide of the invention
                                                                                                                                                                                                                                                                                                                      New nucleic acid encoding a Klebsiella pneumoniae polypeptide, useful for preparing a vaccine composition against Klebsiella pneumoniae.
                                                                                                                                                                                                                                                                                                                                                             WPI; 2003-895346/82.

No. is the number of results predicted by chance to have a
ore greater than or equal to the score of the result being printed,
l is derived by analysis of the total score distribution.

; Sequence 20030, Application US/09248796A
; patent No. 6747137
; GENERAL INFORMATION:
APPLICANT: Keith Weinstock et al
; APPLICANT: Keith Weinstock et al
; TITLE OF INVENTION: NUCLEIC ACID AND AMINO ACID SEQUENCES RELITITE OF INVENTION: FOR DIAGNOSTICS AND THERAPEUTICS
; FILE REFERENCE: 107196.132
; CURRENT APPLICATION NUMBER: US/09/248,796A
; CURRENT FILING DATE: 1999-02-12
; PRIOR APPLICATION NUMBER: US 60/074,725
; PRIOR FILING DATE: 1998-02-13
; PRIOR APPLICATION NUMBER: US 60/096,409
; PRIOR PILING DATE: 1998-08-13
; NUMBER OF SEQ ID NOS: 28208
; SEQ ID NO 20030
; LENCTH: 325
                                                                                                                                                                                                                                                                                                           밁
                                                                                                                                                                                                                         RESULT 2
US-08-470-179-7
                                                                                                                                                                                                                                                                                                                                                                                                                                                                          US-09-248-796A-20030
                                                                                                 Sequence 7, Application US/08470179
Patent No. 5645994
GENERAL INFORMATION:
APPLICANT: Huang Ph.D, Wai Mun
TITLE OF INVENTION: Method and Compositions for
TITLE OF INVENTION: Identification of Species in a Sample
                                                                                                                                                                                                                                                                                                                                                                                         Matches

Sequence 1, Application US/10638333
Patent No. 6825020
GENERAL INFORMATION:
APPLICANT: Sakaguchi, No. 6825020uo
APPLICANT: Kuwahara, Kazuhiko
TITLE OF INVENTION: GANP Protein
FILE REFERENCE: 050208-0014
CURRENT APPLICATION NUMBER: US/10/638,333
CURRENT FILING DATE: 2003-08-12
PRIOR APPLICATION NUMBER: PCT/JP99/04634
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     밁
                                                                                                                                                                                                                                                                                                  ş
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            APPLICANT: Sakaguchi, No. 6673913uo

Patent No. 6610836

GENERAL INFORMATION:
APPLICANT: Gary Breton et. al

TITLE OF INVENTION: NUCLEIC ACID AND AMINO ACID SEQUENCES RELATING TO KLEBSIELLA

TITLE OF INVENTION: PNEUMONIAE FOR DIAGNOSTICS AND THERAPEUTICS
FILE REFERENCE: 2709.2004001

CURRENT ELIZION NUMBER: US/09/489,039A

CURRENT FILING DATE: 2000-01-27

PRIOR APPLICATION NUMBER: US 60/117,747

PRIOR APPLICATION NUMBER: US 60/117,747

PRIOR TILING DATE: 1999-01-29

NUMBER OF SEQ ID NOS: 14342

SEQ ID NO 11029

LENGTH: 544
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            PRIOR FILING DATE: 1998-02-18

                                                                                                                                                                                                                                                                                              US-09-107-433-5189
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Sequence 5189, Application US/09107433

Patent No. 6800744

Patent INFORMATION:
GENERAL INFORMATION:
APPLICANT: Lynn A Doucette-Stamm and David Bush
APPLICANT: Lynn A Doucette ACID AND AMINO ACID
TITLE OF INVENTION: NUCLEIC ACID AND AMINO ACID
SEQUENCES RELATING TO STREPTOCOCCUS PNEUMONIAE
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Matches

Bequence 156, Application US/09710279

Patent No. 6703492

GENERAL INFORMATION:

APPLICANT: KIMMERLY, WILLIAM JOHN

TITLE OF INVENTION: STAPHYLOCOCCUS EPIDERMIDIS NUCLEIC ACIDS.

FILE REFERENCE: PUJ480US

CURRENT APPLICATION NUMBER: US/09/710,279

CURRENT FILING DATE: 2000-11-09

PRIOR APPLICATION NUMBER: 60/164,258
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            SOPTWARE: PatentIn Ver.
